**Warning:** If you are pregnant, nursing, taking medications or planning a medical procedure, consult your health professional before use. Discontinue use and consult a doctor if any adverse reactions occur.

Do not use if inner seal is missing or broken. Keep out of reach of children. Keep bottle tightly closed. Store in a cool, dry place.

**Manufactured exclusively for MannaRelief**  
3017 Red Hawk Drive  
Grand PrairieTX 75052 USA

This product is not intended to diagnose, treat, cure, or prevent any disease.

## Advanced Endocrine System Support

### Hormonal Support Dietary Supplement

#### Hormones

Hormones are produced by the endocrine glands of the body that in turn affect organ function. Through a complex signaling mechanism of the nervous system, hormones help regulate organ function which directly affect cellular metabolism, respiration, reproduction, sexual development, sugar regulation, mineral balance, heart rate, and digestion. Hormones affect everything, from the efficient burning of body fat, to our energy levels, mood, and even help shape our perception. Hormones support our immune system and are beneficial to all of our recovery processes.

#### Maturity

As we mature or when our bodies are under attack from disease, our bodies often require additional endocrine (hormone) support nutrients, not provided by the modern diet. Making up for these deficiencies can be achieved by either hormone replacement therapy (HRT) or by specialized nutrition. Hormone replacement therapy, although effective, can force unwanted levels of hormones into the body. This requires close monitoring of various levels of hormones and often requires the introduction of additional therapy to readjust those hormone levels to bring the body back into balance. As conditions change due to age, stress, or nutrition deficits, the hormone replacement therapy requires ongoing blood work and adjustment.

#### Nutritional Support

Nutritional support for optimal endocrine function allows the body to regulate hormonal production based upon it's own daily requirements. The natural approach is best supported by the injection of a variety plant extracts containing standardized levels of hormone building nutrients, called plant sterols. Nutritional support, as contrasted with HRT, allows the body to self-regulate hormonal production. Manna Relief's Endocrine System Support provides the best, all natural nutritional support for hormonal production without the need for additional adjustment or constant monitoring.
